1. Definizione e contesto

- RCO GMES è **luogo** fisico e virtuale che mette in **contatto** domanda e offerta di servizi **GMES**

DORIS_Net: il progetto bandiera di NEREUS

RegioneLombardia

1. Il contesto: un po' di storia

*DORIS e NEREUS (a sin.) durante
la battaglia con i giganti
(Altare di Pergamo, 200 a.C.)*

- Febbraio 2011: Lancio del Progetto **DORIS_Net**
- Luglio 2011: Costituzione **RCO GMES europei** (Aquitaine, Azores, Bremen, Midi Pyrenée, East Midlands, Lombardia)

2. Perché un RCO regionale

- Perché il livello **regionale**

- **Vantaggi** per gli stakeholder regionali:
 - > Utenti /clienti: domanda
 - > Fornitori di servizi: domanda/offerta/fondi
 - > Autorità Regionali: lobby

- Oltre alla rete **intra-regionale...**

2. Perché un RCO GMES regionale

... una rete **inter - regionale**

www.doris-net.eu/rco

The screenshot shows a web browser window displaying the DORIS_Net website. The browser's address bar shows the URL www.doris-net.eu/rco. The website's navigation bar includes 'Dashboard' and 'Content' links, and a user greeting 'Hello abasoni' with a 'Log out' option. The main content area features a sidebar on the left with the heading 'Upcoming Regional Events' and a central map of Europe. The sidebar text states: 'DORIS_Net is currently organizing and conducting networking events at regional level to promote GMES regional capabilities, to educate potential regional end-users about the added value they can expect from GMES services, and to encourage service providers to communicate information on the benefits of GMES to potential users.' Below this text are logos for 'Gmes', 'Lombardia', and the 'European Union'. The map shows several regions highlighted in yellow, including parts of the United Kingdom, France, and Italy. The map is credited to 'Google' and includes a 'More info...' link.

Making the regional link to GMES

In 2005, the EU made the strategic choice of developing a space-based programme, called **Global Monitoring for Environment and Security (GMES)**. GMES is an independent Earth monitoring initiative led by the European Union and carried out in partnership with the Member States and the European Space Agency (ESA). Its primary objective is to provide information services which give access to accurate data and information in the field of the environment and security and are tailored to the needs of users.

However, at the regional level, stakeholders are often not aware about the potential benefits of services Europe's GMES initiative can provide; yet Europe's ca. 350 regions represent a large reservoir of potential GMES users where GMES services can add value to existing services. Refining data, products and services from global GMES services in the various domains (i.e. land, marine, atmosphere, emergency response, security and climate change), GMES downstream services may be customised to individual user needs, many of which are to be found at the regional level.

Within a number of regions, links between the different types of stakeholders have grown over the years. Often, individual actors have developed inter-regional links but their linkage is in most cases not formalised. When looking at the European scale, that overall awareness of GMES downstream opportunities is still very low with respect to the potential benefits regions could draw from a wider participation. This view is supported by activities conducted by EURISY and AER for instance.

However, being aware of the potential of GMES, of the important role they can play and of the need for exchanging experiences, pioneering LRA's intending to retrieve benefit from space technologies, including GMES, have now started to collaborate within structured networks, NEREUS being the most advanced example. The logically next step is that Local and Regional Authorities (LRAs) engage in a dialogue with service-industry and European decision-makers to maximize the benefits from these innovative tools which have significant impact on the economy, environment and the quality of life of the citizens.

Upcoming Regional Events

DORIS_Net is currently organizing and conducting networking events at regional level to promote GMES regional capabilities, to educate potential regional end-users about the added value they can expect from GMES services, and to encourage service providers to communicate information on the benefits of GMES to potential users.

3. Servizi offerti da RCO GMES Lombardia alle PMI

- Incontri informativi
- Eventi brokerage
- Supporto personalizzato

3. Servizi offerti da RCO GMES Lombardia

- Orientamento alla formazione, partnership
- Altri destinatari: ricerca, PA e cittadini

3. Servizi offerti da RCO GMES Lombardia

Portfolio Servizi/Censimento user - provider

- Servizi forniti nei seguenti **settori**:
 - > uso e copertura del suolo
 - > erosione
 - > risposta alle emergenze
 - > monitoraggio atmosferico

- Stato attuale del censimento **50 attori lombardi** di cui:
 - > 25 utenti, 19 provider, 6 entrambi
 - > 14 PPAA, 4 Centri di ricerca, 12 Università e 20 Aziende

4. Azioni future

- Follow up evento regionale

- Nelle altre regioni:
 - > Supporto a Regione Basilicata costituzione **RCO Basilicata**
 - > Supporto a Regione Debrecen (Ungheria) costituzione **RCO Debrecen - Innova**
